Rivers without Borders: Strategic Dimensions of India's Shared Waters

Why in the News?

05

• Following the **Pahalgam attack**, **India has temporarily suspended the Indus Water Treaty** with Pakistan, reviving the debate on water as a strategic tool in geopolitics.

Transboundary Waters of India

Transboundary waters are **aquifers**, lakes, and river basins shared by two or more countries. They account for **60% of global freshwater flows**.

| Country | Major Shared Rivers | Agreements/Features |
|------------|---|--|
| Pakistan | Indus, Jhelum, Ch <mark>enab,</mark> Ravi, Beas, Sutlej | Indus Waters Treaty (1960) – India gets eastern rivers, Pakistan western rivers |
| Bangladesh | Ganges, Brahmaputra, Teesta, Barak, Feni | Ganga Water Treaty (1996), Teesta negotiations ongoing |
| Nepal | Kosi, G <mark>andak,</mark> Mahakali (Sh <mark>arda), Gh</mark> aghara | Sarada (1920), Kosi (1954), Gandak (1959), Mahakali Treaty (1996) |
| China | Ind <mark>us, Sutl</mark> ej, Brahmaputra (Yarlung Tsangpo) | Hydrological data-sharing agreements, no water-sharing treaty |
| Bhutan | Manas, Sankosh, Torsa, Amo Chu | Hydropower cooperation |
| Myanmar | Barak | Limited regional cooperation , no formal treaty |
| 100 | SI | |

China's Capability to Influence Indian Waters

- **Tibet** is the origin of many key rivers (Indus, Sutlej, Brahmaputra).
- Hydrological Infrastructure: China has built dams and hydroelectric projects:

• Senge Tsangpo, Ngari Shiquanhe (Indus source)

- Barrage at Zada Gorge (Sutlej)
- Control Tactics:
 - Blocking rivers (e.g., Galwan tributary post-2020 conflict)
 - Diversion plans, though not implemented yet for Indus/Sutlej
 - Data withholding: Brahmaputra data blocked in 2017, hampered flood forecasting
 - Artificial lakes: Parechu River lake created in 2004, dubbed a "water bomb"

Limitations on China's Leverage

• Limited Origin Share:

• Only **10-15% of Indus** and **~20% of Sutlej** originate in China

- Himalayan Terrain: Prone to earthquakes; large dam construction is risky
- International Water Laws:

• Violating flow norms could draw global criticism

• **Downstream Impact**:

• Blocking water affects **Pakistan and Bangladesh**, possibly turning them against China

International Water Laws & Conventions

1. Helsinki Rules (1966)

- Non-binding guidelines by International Law Association
- Core Principles:
 - Equitable utilization
 - No significant harm
- Factors:
 - Social/economic needs
 - Drainage area
 - $\circ\,$ Alternative water resources
 - $\circ~\mbox{Cost}$ of alternatives
- 2. UN Watercourses Convention (1997)
 - Legally binding treaty; entered into force in 2014
 - Covers **non-navigational use** (drinking, irrigation, hydropower)

Noios.

- Obligations:
 - Equitable and reasonable use

Prevent significant harm

• Sustainable management

- 3. UN Water Convention (1992, Helsinki)
 - Originally for Europe, opened to all UN states in 2016
 - Goals:

• Sustainable transboundary water management

- Peace promotion
- \circ Conflict prevention
- Obligations:
 - $\circ~$ Prevent, control, and reduce transboundary impacts
 - Equitable usage
 - Regional cooperation via **joint bodies**

Conclusion

Water is increasingly becoming a **geopolitical tool** in India's neighborhood. While India and Pakistan have formal water-sharing treaties like the Indus Waters Treaty, tensions with **China**, which controls river origins in Tibet, reveal vulnerabilities. **Strategic cooperation**, adherence to **international norms**, and **regional diplomacy** are essential to safeguarding India's water security.
